

Word on the Street:

Improvements to Garfield Avenue South (from Park Avenue South to SR-7)

May 2008

Schedule

May 2008 - October 2008

Prepare conceptual-level engineering plans

Oct. 2008 - Dec. 2008

Develop conceptual-level construction cost estimate

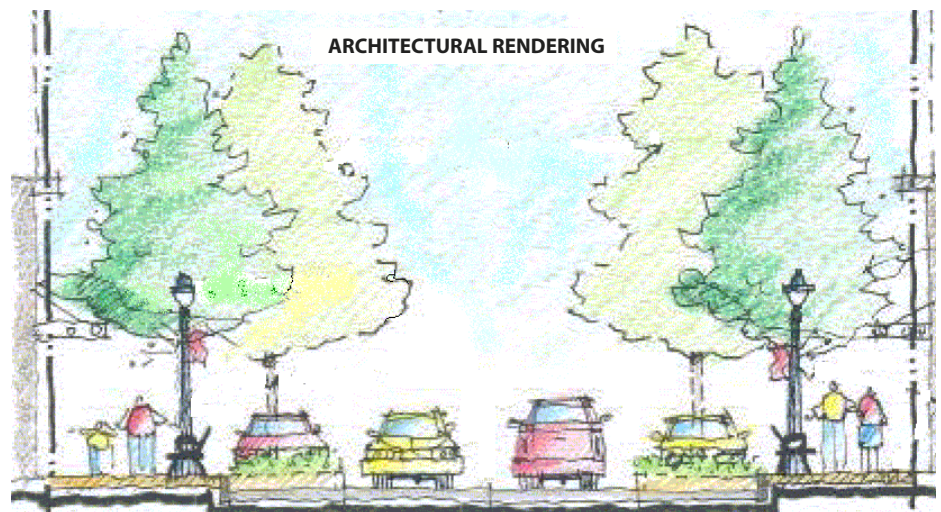

The latest

- **Survey:** The surveyors are in the project area obtaining field information that will provide the basis for concept-level design work.
- **Engineering:** The "Garfield Streetscape Improvement Plan" is being reviewed and initial design work, such as pavement rehabilitation options and sidewalk features are being evaluated.
- **Traffic:** Street lighting, mid-block pedestrian crossing locations and traffic signal modifications are being reviewed.

What's happening

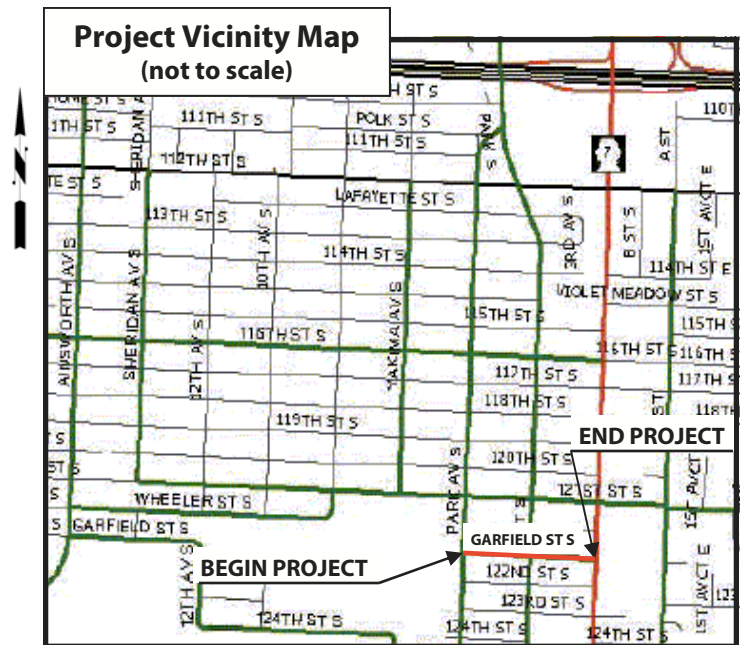

We've started concept-level engineering work for future improvements to Garfield Street South between Park Avenue South and SR-7 (Pacific Avenue South) (CRP 5730). The conceptual engineering is anticipated to build upon the common theme and vision developed in the community based "Garfield Streetscape Improvement Plan". We also anticipate developing plans and a cost estimate for the future improvements, which may include:

- Installing curb bulbs.
- Adding mid-block pedestrian crossings.
- Adding parallel parking on both sides of the street.
- Improving street lighting.
- Adding street furnishings, such as benches and trash receptacles.
- Adding street trees and plantings.
- Undergrounding overhead utilities, if feasible.
