

DRAFT

Spanaway Lake Management Goals

- 1) The number of days per year that Spanaway Lake experiences advisories due to toxic algae blooms will be significantly reduced.
- 2) Recreational uses, including swimming and safely ingesting fish harvested from the lake, will not be negatively limited by water quality.
- 3) Water quality will be monitored consistently and will meet State standards for fishable, swimmable, and aesthetic beneficial uses.
- 4) Aquatic plants will be managed to control and prevent unsafe conditions for recreational uses and invasive species.
- 5) Healthy wildlife populations will be supported and sustainably managed.
- 6) An organizational framework will be instituted to support the stewardship actions needed to effectively manage conditions on Spanaway Lake.
