Tacoma-Pierce County
COVID-19 Variance Application
Moving from Phase 1 to Phase 2

June 2, 2020

Dr. Anthony L-T Chen, MD, MPH
Director of Health, Tacoma-Pierce County Health Department

Bruce F. Dammeier
Pierce County Executive

Introduction

With May 31, 2020 ending the Governor’s Phase 1 Stay Home, Stay Healthy COVID-19 response, Tacoma-Pierce County Health Department seeks to move to Phase 2 of the Governor’s Stay Safe recovery plan. On March 2, 2020, the Pierce County Emergency Operations Center activated the Phase 1 Stay Home, Stay Healthy initiative in support of Tacoma-Pierce County Health Department and as ordered by the Governor. The County has seen positive trends over the last four weeks towards the targets in the category of “large county” and is poised to apply and qualify for Phase 2.

State and county government, private institutions, and other partners banded together to support Tacoma-Pierce County Health Department’s ability to respond to the current pandemic. And our residents have taken action to protect and improve community health.

We are listening to residents and partners to improve our response to bolster recovery efforts. Governor Inslee’s strong direction and guidance helps Tacoma-Pierce County continue to adjust to meet existing and emergent challenges.

Tacoma-Pierce County recommends moving to Phase 2 and seeks the Secretary of Health’s approval.

Local Approval Process and Required Documentation

1. **County Health Official Recommendation Letter**
   - Recommendation letter to move to Phase 2 signed by Dr. Anthony Chen, Director of Health, on May 31, 2020, see Appendix.

2. **Tacoma-Pierce County Board of Health Resolution Vote Results**
   - Resolution from Tacoma-Pierce County Board of Health dated May 31, 2020 endorsing the recommendation and requesting Pierce County apply for a variance, see Appendix.
     - Ayes: 8
     - Nays: 0
     - Abstaining: 0
     - Absent: 2 (Alternate Board Members)

3. **Local Hospital Letters**
   - MultiCare Health System, see Appendix.
   - CHI Franciscan, see Appendix.

   CHI Franciscan hospital system submitted a dated attestation letter to certify that they:
   - Report data into WA HEALTH.
   - Have at least a 14-day supply of PPE on hand.
   - Use PPE conservation strategies.
   - No staff person is wearing any one N95 respirator or surgical mask for longer than one shift.
   - Are following PPE guidance on reuse or extended use in this guidance: [https://www.doh.wa.gov/Portals/1/Documents/1600/coronavirus/PPE-Reuse.pdf](https://www.doh.wa.gov/Portals/1/Documents/1600/coronavirus/PPE-Reuse.pdf)

   MultiCare Health System submitted a dated attestation letter to certify they:
   - Report data into WA HEALTH.
   - Have at least a 14-day supply of PPE on hand.
   - COVID 19 patients account for fewer than 10 percent of inpatient population.
   - Use PPE conservation strategies.
   - No staff person is wearing any one N95 respirator or surgical mask for longer than one shift.
   - Are following DOH’s PPE guidance on reuse or extended use.

   Over the past 14 days, CHI Franciscan and MultiCare Health System consistently reported data in WA HEALTH.
MultiCare Health System data in WA HEALTH not included in this letter: Patients occupy 62.9% of Pierce County licensed beds. Suspected and confirmed COVID 19 patients account for 3% of their inpatient beds. CHI Franciscan data in WA HEALTH not included in the letter: Patients occupy 74% of Pierce County licensed beds. Suspected and confirmed COVID 19 patients account for 7% of their inpatient beds.

Overall suspected and confirmed COVID 19 patients account for 6.4% of all licensed Pierce County beds in acute care hospitals

4. County Council Resolution Vote Results

- County Council Resolution on June 1, 2020, see Appendix.
  - Resolution
  - Ayes: 7
  - Nays: 0
  - Abstaining: 0
  - Absent: 0
Application Narrative

1. Pierce County Epidemiological Summary

COVID-19 cases and deaths in Pierce County have followed a similar trend as the Washington State average. Residents of every Pierce County region have been diagnosed with COVID-19. As seen in Figure 1, the number of COVID-19 cases peaked in late March/early April and have decreased since then. Since late May, new COVID-19 cases have occurred at a steady rate.

More than three-quarters (79%) of the cumulative COVID-19 cases among Pierce County residents do not have an epidemiologic link to other cases. In the last 14 days (since May 31), 66% of cases do not have another case linked. Applying the 6-day lag used for the COVID-19 case rate, the number stays steady at 66%. After eliminating cases with links to long-term care and other facilities, these percentages become 58%, 52%, and 45%, respectively.²

² LHJ notification date used in this analysis.
COVID-19 deaths among Pierce County residents show similar trends, mirroring COVID-19 case counts but about 3 weeks later, reflecting the typical duration of a severe illness associated with COVID-19 (see Figure 2). About 60% of deaths were among residents of long-term care facilities in Pierce County.

**Equity Analysis**

Prior to the COVID-19 epidemic, epidemiologists at Tacoma-Pierce County Health Department developed an equity framework to evaluate inequities among various Pierce County communities. This framework provides demographic, social and economic variables to use as a lens to view health outcomes in different ways. We then applied our health equity framework to COVID-19 surveillance data.

Figure 3 shows that COVID case rates vary by racial/ethnic group. In general, persons of color in Pierce County have had higher risk. The group with the highest COVID-19 rate is Native Hawaiian or Other Pacific Islander (NHOPI) residents. The NHOPI rate is about five times greater than the white non-Hispanic rate. Black, Hispanic, and Native American diagnosis rates are roughly twice those of non-Hispanic white residents (see Table 2). The percentage of COVID-19
cases that are persons of color has risen over time. This population now accounts for about 50% of all COVID-19 cases in Pierce County.

Although people ages 60 and older make up 22% of the county’s population, they account for 49% and 91% of hospitalized and deceased COVID-19 cases, respectively (see Table 3).

</table>
Figure 4 describes the cumulative concentration of COVID-19 cases by census tract in Pierce County. Many of the tracts with the most cases (shaded dark purple) are in southeast Tacoma, as well as the Parkland and Puyallup communities (light green ovals).
Strong spatial correlation exists between COVID-19 incidence and areas with lower median income in Pierce County. Figure 5 shows median household income by census tract in Pierce County (U.S. Census Bureau). Although the scale is slightly different than the previous map, you can see that the tracts in which median household income is lowest (light green ovals) also tend to be in southeast Tacoma, Parkland and parts of Puyallup.

In Figure 6, each blue bar represents about 25% of Pierce County residents. People who live in areas where more than 72% residents have attended college are less likely as a group to be diagnosed with COVID-19. The census tracts with the highest risk for COVID-19 are those in which less than 55% of residents have attended college.
In Figure 7, we show the percent of residents with limited English. People living in census tracts with a higher percentage of non-English speakers also have more risk for COVID-19.

We also stratify our data by median household income, the proportion of households living in poverty, and the proportion of people who have health insurance.

2. Pierce County COVID-19 Testing Sites Summary

Pierce County test locations are distributed throughout the county to serve individuals who are low income, lack insurance and may not have a medical home, in addition to those with established medical providers. In addition, Community Health Care, Walgreens and Kroger sites offer free testing. The locations are located on the Tacoma-Pierce County Health Department’s website:

https://www.tpchd.org/healthy-people/diseases/covid-19/testing-information

The listings include hours, days of the week, and addresses of sites. They are listed by affiliation to health systems, if they are temporary, drive through, and test type. This information is promoted through an ongoing communication plan and strategies including coordination with partner agencies serving diverse populations, social media, blogs and media interviews. We add new sites as we learn about them. See Appendix

Tacoma-Pierce County Health Department is in process of entering into CARES funded agreements with MultiCare Health System, CHI Franciscan, and Community Health Care to expand capacity and capability to better serve all individuals regardless of ability to pay, with or without insurance, and located in areas that are underserved. Northwest Physician’s Network wants to explore involving independent physicians in expanded testing efforts in various communities.
3. Median Onset

Table 4

Figure 8

Evidence suggests that approximately 25% of cases do not show symptoms and targeted testing may result in identification of a notable number of asymptomatic cases. These ‘non-reporters’ include both asymptomatic cases and those who did not report this information.
4. COVID-19 Test Results

The average percent of tests positive for COVID-19 during the past week is 2.7%. This has steadily decreased over the past four weeks from 7.4% during the last week of April.

The average number of tests performed per day during the past week per positive case was 37.3. This has steadily increased toward the target of 50 since the last week of April when it was 15.7. We believe the total number of tests is underestimated and know anecdotally of about 3,000 negative tests that have not been submitted to the Department of Health. We have contacted Walgreens, MultiCare Health System, CHI Franciscan and Madigan Hospital to obtain documentation of negative test results and expect to have those entered in WDRS or submitted to Department of Health.

</table>

5.b. Cases Identified and Reached

Percent of cases reached by phone or in person within 24 hours of receipt of positive lab test report. Target = 90%.

In the last 2 weeks (5/17 to 5/30), we reached out to cases within 24 hours of notification 98% of the time for which we have a date of first contact recorded. For the same time period, we conducted an interview with cases within 24 hours of notification 81% of the time for which we have a date of interview recorded.

The date of interview is missing from almost one-fourth (24%) of all COVID cases in our internal database. We recently conducted a quality process review and have implemented steps to decrease the percent of missing data.
5.c. Contacts Identified and Reached

Percent of contacts reached by phone or in-person within 48 hours of receipt of positive lab test report on a case. Target = 80%.

In the last 2 weeks (5/18 to 5/28), we conducted an interview with contacts within 48 hours of case notification (n=164) **89%** of the time.

We had a high number of contacts with missing data (about half) in our internal database. The quality process review discussed above also addressed improvements in collecting and reporting these contact data variables.

5.d. Case Status and Ability to Isolate

As we move to Phase 2, we will implement daily monitoring for cases under isolation. This system is under development and will use Case Risk and Exposure Surveillance Tool (CREST) to electronically notify cases under isolation. This system is scheduled to be in place on June 10. Until this is operational, we have developed a plan to call or text all new cases under isolation daily basis to check on their overall status and ability to isolate. Tacoma-Pierce County Health Department staff notified all case contacts on June 1 that they will receive daily communications beginning June 2. Currently, we provide all cases under isolation with a telephone number to contact Public Health staff if they become symptomatic or need resources. We monitor and respond to these calls daily.

5.e. Contact Symptom Development and Ability to Self-Quarantine

As we move to Phase 2, we will implement daily monitoring for contacts under quarantine. This system is under development and will use the CREST system to electronically notify cases under isolation. This system is scheduled to be in place on June 10th. Until this is operational, we’ve developed a plan to call or text all new cases under quarantine daily to check on their overall status and ability to isolate. Tacoma-Pierce County Health Department staff notified all case
contacts on June 1 that they will receive daily communications beginning June 2. Currently, we provide all cases under isolation with a telephone number to contact Public Health staff if they become symptomatic or need resources. We monitor and respond to these calls daily.

5.f. Tacoma-Pierce County Health Departments Case and Contact Investigation Hours

Tacoma-Pierce County Health Department conducts case and contact investigations 7 days a week between 8 a.m. and 4:30 p.m.

Case, contact and facility investigation teams meet daily and respond to reports. In addition, we maintain a 24/7 on call resource to cover emergent after hour needs.

5. Isolation and Quarantine Facilities

</tr>
</tbody>
</table>
6. Links to Needed Services

Currently Tacoma–Pierce County Health Department investigation staff link people under home isolation or quarantine with needed services. As we receive requests, we connect cases with community resources. To best serve our community and provide even more resources, we plan to contract with a community agency to respond to resource needs. With the implementation of CREST 2.0 on June 10, people in home isolation or quarantine will receive a daily text asking about symptoms or resource needs.

We will refer any responses for resource needs to the community agency.

To ensure connection with clients, the contract specifies the referral agency will provide a report of all people connected to resources and resources provided.

7. Outbreak Investigations and Technical Assistance at Congregate Care Facilities

The COVID-19 disease investigation team has trained and supported congregate living and health care facilities such as skilled nursing facilities, jails, homeless shelters to track and investigate outbreaks. As Tacoma–Pierce County moves into Phase 2 and beyond, we understand and are prepared to respond to the increased risk for outbreaks in workplaces such as food processing facilities, manufacturing plants or office buildings and other settings. The disease investigation team is working with epidemiologists to improve data collection and management and systematically track and report workplace outbreaks. The team maintain resources to rapidly conduct testing of all residents. The team maintains a reserve supply of 1,000 test kits to ensure this.

Tacoma–Pierce County Health Department developed a “drop team” structure to assist high-risk facilities with prevention as well as response during outbreaks. We have identified and investigated cases in 23 long-term care or rehabilitation facilities. A drop team has provided educational visits to assess prevention readiness and outbreak mitigation visits. Tacoma–Pierce County Health Department has the capacity to concurrently deploy up to three drop teams comprised of nurses and doctors. Partnerships with both MultiCare Health System and CHI Franciscan are inclusive of their drop teams thereby creating a collaborative, scalable support structure now and in the future.

Comprehensive educational visits allow us to:

- Assess facility PPE needs.
- Review policies for testing, isolation, and quarantine.
- Develop plans for investigation of suspected or confirmed transmission.
- Improve awareness of local and regional government mandates.
Outbreak investigations include assisting the facility infection preventionist and leadership in contact investigation and triage of residents to coordinate testing of staff and residents, identify their isolation and quarantine units, and coordinate transport if patients require higher level of care.

10. **Plan to Protect Low Income Communities or Communities of Color**

Since February, our Incident Command System (ICS) has had two FTE dedicated to the role of equity officer, ensuring our response and recovery work is focused on the most vulnerable populations. Their goals are to:

- Protect people experiencing health inequities from the short- and long-term health, social, and economic effects of COVID-19.
- Strengthen community resilience to respond to COVID-19 within communities experiencing health inequities.
- Strengthen short- and long-term trust between communities experiencing health inequities and Pierce County’s government partners in Incident Command Structure.
- Operationalize health equity in COVID-19 response.

In March, the equity team collaborated with epidemiologists to create a preliminary Health Equity Analysis for COVID-19. They customized a Health Lens Analysis Framework to help ICS staff consider the potential unintended equity consequences of their decisions during response and recovery. As test results came in, the disproportionate effects of the virus on certain communities became more obvious.

The data demonstrate disproportionality for four main racial and ethnic groups: Native Hawaiian & Other Pacific Islander, Latinx, African American and Native American. For all three of these communities, beyond the disease itself, the social economic and environmental conditions in which they live (including income) further compound the effects of the pandemic. A community needs assessment is essential to understand culturally specific needs of priority populations and highly affected areas.

We plan to train 15–30 community health workers and community leaders with lived experience in these vulnerable communities to lead listening sessions to reach 200–500 community members. We recently held our first listening session with members of the NHOPI community in partnership with the Asia Pacific Cultural Center. Additional sessions with other impacted groups are scheduled and we expect to complete the community needs assessment by the end of July.

In April, we formed the Tacoma-Pierce County Equity Action Network, a countywide team of coalitions, equity staff, partner organizations and community leaders, who will share the information learned in these listening sessions with the Pierce County Recovery and Resiliency Task Force and ICS. In collaboration with the COVID-19 communications team, the Equity Action Network will develop tailored communication tools and outreach strategies, such as on Spanish-speaking community radio, and will help reach deeply into the Pierce County communities most affected.

Whenever possible, we will pay for the participation and expertise of community leaders, and we will always report the data we gather to the communities from which it came. We will support their work in developing tailored communication tools, culturally relevant materials, community based social marketing concepts and deliverables. We will offer consultation to support trusted messengers to deliver advice people can act on so they can protect their health, improve their resiliency and experience healing and recovery from this pandemic.
Based on our listening sessions and other inputs, we will create low-barrier, accessible and equitable access to testing that directly responds to community needs. The community outreach team will help recruit case investigators and contact tracers from impacted communities, including community health workers and other leaders with lived experience in highly affected communities (both demographic and geographic). Our communications and hiring practices will be culturally grounded and accessible. Employing case investigators and contact tracers from vulnerable communities will help us focus our resources where they can do the most good.

As part of our response strategy, we will also adapt our Communities of Focus, the Health Department’s geographic approach to improve health in six Pierce County neighborhoods that face some of the highest disparities. Its four strategies are:

- Increase partnerships (cross sector collaboration and collective impact).
- Increase investments (sustainable funding and people power).
- Customer service (culturally and linguistically appropriate services (CLAS), competent communications and accessibility).
- Community engagement (we use the International Association of Public Participation Spectrum. as a guide and strive to collaborate and empower community members whenever possible).

While the Communities of Focus face serious health risks because of their social, economic and environmental conditions, this strategy leverages their protective factors and willingness to partner with us to codesign health interventions for their communities. In May, we increased staff time on our Communities of Focus teams to help gauge community needs and conduct at least one listening session per area as part of the community needs assessment.

Tacoma Creates is an example of how Communities of Focus work has adapted to meet the specific challenges of COVID-19. Tacoma Creates is an initiative of the City of Tacoma, which is partnering with the Health Department to increase the availability of arts, culture, heritage and science projects in East and South Tacoma, two Communities of Focus. Through a process of Participatory Planning and Budgeting, community members have final decision-making power to design and allocate $100,000 for innovative projects in each neighborhood. Before the pandemic, we gathered thousands of their ideas, and they narrowed them. However, ideas such as a multicultural community festival aren’t viable given social distancing. So, artists and community members are co-designing innovative projects that promote healing and resiliency. Now, instead of the festival, community members in East Tacoma are talking about ideas such as hosting a virtual Dia de los Muertos festival to honor the community members lost during the pandemic.

The community needs assessment and ongoing work of the Equity Action Network, Communities of Focus and Tacoma Creates will elevate policy, system and environmental needs caused by COVID-19. Our equity approach will combine the knowledge of these issues with our robust community engagement to seek policy, systems and environmental solutions to the complex problems that led to these communities being disproportionately impacted. The extended timeline as we go in and out of response and recovery for 12-24 months gives us an extraordinary opportunity to advance equity-informed policy changes that may improve health long-term.
To keep our public informed of how COVID-19 is affecting our community, including who’s affected and what they can do to protect themselves and those around them, timely and accurate public health information is essential. As we move into broader testing efforts through our local healthcare systems and providers, testing of higher risk populations through Health Department drop teams, and related contact tracing efforts for exposed individuals, our community will continue to rely on us for updates, answers, and solutions.

Of critical importance is getting this information to community members who may not trust government, may not use web-based communication, and may not access “mainstream” media.

We will align our COVID-19 communications to support the work of the Tacoma-Pierce County Equity Action Network as they conduct outreach to vulnerable populations. We will help develop tailored communication tools, culturally relevant materials, community-based social marketing concepts and deliverables, and consultation to support trusted messengers to deliver advice people most affected by the pandemic can act on.

We will also pilot a Language Access Lead role within our COVID-19 communications team. According to Title VI of the Civil Rights Act, agencies are responsible to ensure meaningful language assistance services. Following FEMA guidance, the state Department of Health’s Equity Office provided specific guidelines to advance this need during the COVID-19 pandemic. We are happy to advance this initiative with the support of the CARES act funding.

Tacoma-Pierce County Health Department should ensure our information and services are accessible to all communities, regardless of language, disability status, or other factors. With the support of CAREs act funding, we will pilot the Language Access Lead role within the content writer position to ensure the Department has systems in place to provide meaningful access to vital information through:

- Translated public documents, materials, and essential website information into appropriate languages. (Work with media specialist to process translation requests).
- Access to information for individuals with disabilities. This includes providing access for individuals with hearing, vision, sensory, developmental, and/or cognitive disabilities.
- Audio and video communication strategies. Some communities and language groups have indicated a preference for receiving information in audio or video format.
- Spanish translation of all urgent updates and vital information communicated via social media.
- For vital information, news releases are issued in both English and Spanish or other languages depending upon the needs of targeted media outlets.
- Consult with Tacoma-Pierce County Equity Action Team who will gather information from community stakeholders and partners to identify preferred methods of communication of Limited English Proficient persons.
- American Sign Language Interpretation at all press conferences.
- Transcription of Health Department produced video content.

Information that if not provided accurately or timely, would cause harm to the individual, e.g., how to protect yourself from COVID-19 or forms to access unemployment, food, or other benefits.
Appendix

Reproductive Rate

Tacoma-Pierce County Health Department is in process of capturing its own transmission data for ongoing reporting. For this submittal, we are leveraging the Governor’s Transmission Trend chart as our data for this criterion. As Governor Inslee shared in his May 29 press conference, the effective reproductive number for Western Washington has been below 1.0 since early May. The Institute for Disease Modeling provided data.

Models of Eastern and Western WA highlight differences in trends for transmission across the state.

Figure 9

$R_e$ estimates for Eastern (red) and Western (purple) WA, with 2 standard deviation error bars. Our most recent estimates suggest that $R_e$ was below 1 and likely declining through May 7 in Western WA, but was above 1 and likely increasing in Eastern WA through May 3.

Subject: Letter of Attestation for COVID-19 County Variance Plan: Moving from Phase 1 to Phase 2

To whom it may concern,

St. Anthony Hospital, St. Clare Hospital, and St. Joseph Medical Center attest to the following:

1. We currently have 20 percent surge capacity to accommodate a 20 percent increase in suspected or confirmed COVID-19 hospitalizations.
2. We are reporting, and will continue to report daily, including on weekends, all data requested by DOH into WA HEALTH.
3. We have at least a 14-day supply on-hand of PPE, including N-95 respirators, surgical masks, face shields, gloves, and gowns. Our system can supply us with the PPE that we need.
4. We are using PPE conservation strategies, and certify that no staff person is wearing any one N95 respirator or surgical mask for longer than one shift, and are following PPE guidance on reuse or extended use in this guidance:

TO: Tacoma-Pierce County Health Department
SUBJECT: MultiCare’s Pierce County hospitals meet DOH criteria

MultiCare Health System attests that all MultiCare Hospitals in Pierce County including MultiCare Tacoma General Hospital, MultiCare Good Samaritan Hospital, MultiCare Allenmore Hospital, and Mary Bridge Children’s Hospital meet the following criteria from the Washington Department of Health’s COVID-19 County Variance Plan: Moving from Phase 1 to Phase 2, Section 1c:

i. We have the ability to accommodate a 20 percent increase in suspected or confirmed COVID-19 hospitalizations.
ii. We report on a daily basis, including weekends, the data requested by DOH that we have access to. We are diligently working on collecting the remaining data.
iii. We have a 14-day supply on-hand of PPE, including N-95 respirators, surgical masks, face shields, gloves and gowns. Please note that some of our glove supply is stored with our vendor.
iv. We are using PPE conservation strategies. Those practices are in compliance with DOH guidance on PPE reuse including directing staff to not wear a mask longer than one shift.
v. COVID-19 patients account for fewer than 10 percent of our inpatient population.

Thank you.

William G. “Bill” Robertson
President and CEO
MultiCare Health System
Exhibit A: Recommendation letter to move to Phase 2 signed by Dr. Anthony Chen, Director of Health, on May 30, 2020

May 30, 2020

TO: Tacoma-Pierce County Board of Health

FROM: Anthony L-T Chen MD, MPH
       Director of Health

SUBJECT: COVID-19 - Recommendation to enter SAFE START Phase 2

I have carefully reviewed the COVID-19 disease trends within Pierce County and believe we are prepared to move to the next phase in the Safe Start recovery plan. I recommend the Tacoma-Pierce County Board of Health approve a resolution supporting the application by Pierce County to enter Safe Start Phase 2.

The first confirmed case of COVID-19 was announced in the state of Washington on January 21, 2020. Governor Inslee announced a public health state of emergency on February 29. He announced a stay-at-home order on March 23, which he extended to May 31.

On May 29, the Governor announced revised criteria to apply to enter Safe Start recovery plan Phase 2. Pierce County meets or is very close to meeting these criteria.

The disease rate in Pierce County is slowly and steadily decreasing. The attached documents demonstrate the readiness and capacity within our hospital systems, our ability to test, conduct case and contact investigations, and to respond to outbreaks within high-risk populations.

To protect the health of everyone in our community, I strongly urge all residents to continue to follow the guidance of public health officials:

- Wash hands frequently.
- Maintain six feet social distance.
- Wear face coverings in public.
- Stay home if you feel ill.
- Monitor yourself daily for COVID-19 symptoms.
- Consult with your primary care provider if you have: cough, shortness of breath, difficulty breathing or at least two of these symptoms: fever, chills, shaking with chills, muscle pain, headache, sore throat and loss of taste or smell.

Sincerely,

Anthony L-T Chen, MD, MPH
Director of Health

Tacoma-Pierce County Board of Health Resolution 2020-4646

RESOLUTION NO. 2020-4646

A RESOLUTION OF THE TACOMA-PIERCE COUNTY BOARD OF HEALTH, PIERCE COUNTY, WASHINGTON, SUBMITTING AN APPLICATION TO MOVE TO PHASE 2 OF SAFE START RECOVERY PLAN.

WHEREAS, on February 29, 2020 the Governor of the state of Washington issued Proclamation 20-05 declaring a public health state of emergency for all counties in Washington State due to the novel coronavirus COVID-19; and

WHEREAS on March 23, 2020 the Governor issued Proclamation 20-25, which extended the state of emergency, established the Stay Home, Stay Healthy order until April 6, 2020, and prohibited all people from leaving their homes except for those engaged in or obtaining essential services; and

WHEREAS these orders were subsequently extended through May 31, 2020, and the Governor subsequently provided a Safe Start four phase recovery plan to restart business and modify physical distancing requirements when disease activity is adequately suppressed and readiness in key areas is achieved; and

WHEREAS the Stay Home, Stay Healthy order expires on May 31, 2020, and the Governor and the state Department of Health issued a revised Safe Start Recovery Plan effective June 1, 2020 that provides county by county flexibility to apply to move through the phases; and

WHEREAS the Director of Health of Tacoma-Pierce County Health Department (Health Department) has reviewed relevant public health data, determined Pierce County meets the revised eligibility criteria, and recommends Pierce County apply to move to Phase 2; and

WHEREAS on this date the Board of Health has heard from Health Department staff and reviewed data and documents demonstrating Pierce County’s ability to meet the requirements to move to Phase 2; now, therefore,

BE IT RESOLVED BY THE TACOMA-PIERCE COUNTY BOARD OF HEALTH that after reviewing relevant public health data and the Director of Health’s written recommendation (a copy of which is attached as Exhibit A), the Board of Health recommends the Pierce County Executive apply to the Secretary of Health to move to Phase 2 of the Safe Start Recovery Plan.
This Resolution shall be effective immediately upon adoption.

Pierce County Council Resolution No. R2020-41

RESOLUTION NO. R2020-41

A Resolution of the Pierce County Council Authorizing the Submittal of an Application to the Washington State Department of Health to Proceed to Phase 2 of the Governor’s Safe Start Recovery Plan and Accepting the Tacoma-Pierce County Board of Health’s Recommendations and Plan to Implement Phase 2 Modifications.

Whereas, on February 29, 2020, the Governor of Washington State issued Proclamation 20-05, proclaiming a state of emergency for all counties throughout the State of Washington as a result of the coronavirus disease 2019 (COVID-19) outbreak in the United States; and

Whereas, on March 23, 2020, the Governor issued Proclamation 20-25 which established the “Stay Home Stay Healthy” order prohibiting persons from leaving their homes, participating in gatherings and making non-essential trips. Proclamation 20-25 expired on May 31, 2020; and

Whereas, on May 1, 2020, the Governor announced the Safe Start Washington: A Phased Approach to Recovery (“Safe Start”), a four-phased approach to resuming recreational, social and business activities in Washington State; and

Whereas, on May 29, 2020, the Governor announced modifications to the original “Safe Start” plan to provide for more flexibility for counties and to allow counties the ability to apply to the Secretary of Health to demonstrate their ability to safely allow additional economic activity based on target metrics and to provide for a holistic review of counties’ COVID-19 activity and ability to respond; and

Whereas, beginning on June 1, 2020, any county can apply to the Secretary of Health to move to the next phase. Pierce County is presently in Phase 1 and meets the criteria set forth in the Governor’s order, taken as a whole, to move to Phase 2 of the “Safe Start” plan; and

Whereas, the Council is in receipt of and accepts the Tacoma-Pierce County Health Department’s recommendations and plan for moving Pierce County from Phase 1 to Phase 2 as set forth in Resolution No. 2020-4646; Now Therefore,

BE IT RESOLVED by the Council of Pierce County:
Section 1. The Pierce County Council hereby accepts the Tacoma-Pierce County Board of Health's recommendations and plan dated May 31, 2020, as set forth in Resolution No. 2020-4646, attached hereto and incorporated herein by reference as Exhibit A, for moving Pierce County from Phase 1 to Phase 2 of the “Safe Start” plan.

Section 2. The Council hereby authorizes the Executive to submit an application in accordance with the most current instructions issued by the Department of Health requesting the approval of the Secretary of Health to move Pierce County from Phase 1 to Phase 2.

ADOPTED this ___ day of June __, 2020.

ATTEST:

PIERCE COUNTY COUNCIL
Pierce County, Washington

Denise D. Johnson
Clerk of the Council

Douglas O. Richardson
Council Chair

Resolution No. R2020-41
Page 2 of 2
Investigation Team Expansion Summary

Introduction
Our Investigation Team is comprised of:

- Case investigators.
- Contact investigators.
- High-risk facility investigators.
- Administrative support.
- Data entry support.
- Laboratory coordinators.

Tacoma-Pierce County Health Department believes a surge of cases is likely to occur as Washington opens, schools resume operation, and seasonal illness occurs. In the event of a surge, we’ve planned for the following scenario:

<table>
<thead>
<tr>
<th>Cases per Day</th>
<th>Contacts per Day</th>
<th>Generation 2 Contacts per Day</th>
<th>High Risk Facilities per Day</th>
</tr>
</thead>
<tbody>
<tr>
<td>350</td>
<td>1400</td>
<td>320</td>
<td>10</td>
</tr>
</tbody>
</table>

This ensures we meet the Washington State Department of Health (DOH) criteria outlined in the latest COVID-19 County Variance Plan: Moving from Phase 1 to Phase 2.

The criteria establish the need for 15 case and contact investigators for every 100,000 population:

- $903,000 / 100,000 \times 15 = 135$ case and contact investigators.

This plan summary outlines strategies, timelines and progress in 4 broad areas:

- Expansion Pool Development.
- Training.
- Workspace Expansion.
- Procurement.
Expansion Pool Development
This is a flexible, initial plan. As discussions with partners clarify available resources and as a work facility becomes available, we are prepared to adjust the plan. Tacoma-Pierce County Health Department will train investigators from the following sources, listed in order of anticipated need:

- Re-assigned health department staff (May, June, July).
- Furloughed or laid off county and city staff (June, July).
- Medical Reserve Corps volunteers (June, July, August).
- Public applicants (July, August, September).
- Private sector case and contact employment firms (September, October. We do not anticipate drawing from this pool).
- Washington State National Guard / Department of Licensing (October. We do not anticipate drawing from this pool).

Expansion Schedule
Our plan is staged to scale up or down depending on the current and projected need. We intend to over recruit and over train to allow for attrition between training and potential activation.

Expansion Timeline, Closing the Gap
Projected timeline to meet variance application criteria:

Projected timeline to meet health department scenario criteria:

**Training Plan**

Remote Training Curriculum (8 hours)
- Introduction to Public Health and Tacoma-Pierce County Health Department.
- Association of State and Territorial Health Officials’ Making Contact: A Training for COVID-19.
- Contact tracers.
- Confidentiality and HIPAA.
- Supplemental learning.

In-Person Training Curriculum (4 hours)
- COVID-19 Information and Emergency Response.
- Isolation and quarantine guidance.
- Interview and communication tips.
- PCTV investigation example video.
- Process overview.

**Workspace Expansion**

Current Workspace Capacity
Investigation Team is currently working out of the 3701 Pacific Avenue health department facility. This facility has limited capacity to support additional staff.

Short-Term to Mid-Term
If needed, Investigation Team could expand into the health department’s main building, located at 3629 South D Street. This option would limit the department’s ability to re-open services and maintain physical distance guidelines.

Mid- to Long-Term
Tacoma-Pierce County Health Department and Pierce County are investigating potential solutions to house an expanded workforce.

**Procurement**

Pierce County Council directed $67 million of federal Coronavirus Aid, Relief, and Economic Security (CARES) Act funds to Public Health Emergency Response. Tacoma-Pierce County Health Department requests access to these funds through Pierce County Finance Department as outlined in Pierce County Emergency Resolution R2020-35 and Emergency Ordinance 2020-60.

Procurement requests are routed through Pierce County Department of Emergency Management and Tacoma-Pierce County Health Department’s Unified Command ICS. Procurement requests to support case and contact investigations include:

- Labor.
- Technology.
- Facility Lease Agreements.
- Office Supplies.
Pierce County Medical Reserve Corps Letter

May 20th, 2020

Dear Tacoma-Pierce County Health Department,

The Pierce County Medical Reserve Corps (MRC) has contributed, as requested, approximately 3 contact tracing volunteers a day since March 2020. Our unit has over 600 active members, many of which are eager to volunteer or work for the health department during this time.

We estimate that we can provide up to 20 volunteers each day for the Health Department based on current interest and availability. Over 30 volunteers are trained to support contact tracing and another 20 would like training. The interest to volunteer for COVID-19 response continues to grow.

The MRC has onboarded over 60 new volunteers since the beginning of March. This has already exceeded the volunteers processed in the two previous years combined. We continue to see applicants interested in our disease investigation team and enthusiastic about supporting COVID-19 response.

Our volunteers want to help as much as possible. Currently, our organization has additional capacity for response work. Please consider this when planning for the increased need for contact tracing.

Sincerely,

Olga Kimbrel
President, Pierce County MRC
